Drone Certification Courses

Aviation Training runs CAA certified drone courses for part 101 and 102 certification. A drone is an aircraft, and you are a pilot. Drones, operated safely, can be exciting and fun, but in order to effectively operate on a serious recreational, or commercial level, you need to understand, and be certified in the rules of the air.

Included in the 2 day drone course:

- › The rules covering Drone flying and activities
- › Flight planning
- › Weather, and how it impacts your flying
- › Permissions under Part 101 and 102
- › NOTAMS (Notice to Airmen)
- › Privacy considerations
- › Knowledge testing
- › Airspace, and the rules surrounding it
- › Airshare
- › Pre flying your aircraft
- › Part 102 Flight Test

and much more...

Our course has been developed by Commercial Pilots, for Drone pilots.

Aviation Training is a CAA approved 141 training organisation
